No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The cDNA was isolated from a human liver cell cDNA library, and the liver. The protein has homology with the rat organic cation excretion, and may have a similar function. The protein drug may be used to raise specific antibodies, as assay reagents, as idanostic tissue markers, for the isolation of cognate receptors, Nucleotides encoding the protein may be used to raise specific antibodies, as assay reagents, as ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or nucleotides may be used to screen for agonists transformed with these potentially useful therapeutically.
                                                                                                                         481

                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA biodiversity and for nutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     02-AUG-2001.

This sequence represents the coding sequence of human cDNA clone CPMA which encodes a 32 kD protein with two putative transmembrane domains. The cDNA was isolated from a human liver cell cDNA library, and the community of the liver. The protein has been found to be expressed only in transporter (EMBL Accession No. V0945) which is involved in drug cextrection, and may have a similar function. The protein GC may be used to raise specific antibodies, as assay reagents, as CC ligands and binding proteins, and as binding proteins, and as binding active agents. CC Nucleotides encoding the protein may be used as primers and probes or CC antisense molecules, and in gene therapy. Cells transformed with these CC potentially useful therapeutically.
                                                                                                                                                                                                                                                                                                                     Matches

OAT's are membrane proteins that facilitate the transport of organic anions across the protein membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion. hOAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hOAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding human organic anion transporter polypeptides,

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -  $\,$ 

Disclosure; SEQ ID NO 24948; 3071pp + Sequence Listing; English

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) ca amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cativity, and can be used in gene therapy and vaccine production. (I) cativity, and can be used in gene therapy and vaccine production. (I) cativity, and can be used in gene therapy and vaccine production. (I) cativity, and can be used in gene therapy and vaccine production. (I) cativity of diseases associated with inappropriate (I) expression. For cativity of the production of the proteins or to that affect the activity of (I) by expressing inactive proteins or to catheticate the activity of (I) by expressing inactive proteins or to capplement the patients own production of (I). Additionally, (I) cathetic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, cathetic acids into a host cell and culturing the cell to express the cathetic cancids and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic cancers and cancer metastases of haematopoietic antigen genomic to sequences from the present invention. AAK54942 to AAK54950 and AAM82169 crantersent sequences used in the exemplification of the present invention. represent sequences used in the exemplification of the present invention.

CC anino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC archivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC supplement the patients own production of (I). Additionally, (I) CC orotein. (I) proteins and polynucleotides may be used to prevent, CC protein. (I) proteins and polynucleotides may be used to prevent. CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703 cancers and cancer metastases of haematopoietic antigen genomic to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK64942 to AAK94950 and AAM82169 cancers and cancers used in the exemplification of the present invention.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic proteins and gene therapy and vaccine production. (I) treatment of diseases associated with inappropriate (I) expression. For expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to freat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to product on of (I). Additionally, (I) the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

The present sequence encodes a calcium channel transport polypeptide. The polynucleotides, polypeptides, and antibodies are useful for preventing, treating, or ameliorating diseases associated with anomalies in calcium trafficking across the plasma membrane. They are used to diagnose, detect and treat or prevent diseases or conditions such as neural disorders (e.g. HIV-induced dementia), immune system disorders (e.g. rheumatoid arthritis), muscular disorders (e.g. muscle contractile dysfunction), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. arrhythmias), renal disorders, proliferative disorders, and/or cancerous diseases and conditions (e.g. lung carcinoma or breast cancer).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proliferative disorder; cancer; lung carcinoma; breast cancer; ss

CC thrombolytic activities; receptor or ligand activities; or may be conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myelold or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myelold or lymphoid cell conditions, c.g., by protein or gene therapy. Such conditions include conditions, chronic inflammatory conditions (e.g., asthma or arthritis), correctly conditions include conditions conditions and abnormal conditions include inflammatory conditions, coronary heart disease, coronary heart disease, conditions in conditions and ulcers, while those with immunomodulatory activities may be used to promote wound immunomodulatory activities may be used in the treatment of viral, conditions with growth factor activity may be used in cell cultures to plypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells conditions and uncertain cells considered by illness, companied to augment or replace cells damaged by illness, and in drug screening techniques. The present sequence represents a cDNA encoding a covel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby glving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention management of the protein activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      haematopoiesis regulatory activity; tissue growth activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or chemokinetic activities;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject, arthritis and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences ABB10981-ABB12330 represent 1350 novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 677; 1963pp; English.

The polynucleotides are useful immunosuppressant and cytostatic activity. The polypucleotide or no polypucleotide in gene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity/nhibbin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 1418; 10078pp; English.

The present sequence is transporter and ion channel-10 (TRICH-10) cDNA. TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral sclerosis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth neurological disorders including Alzheimer's disease, Duchenne muscular dystrophy, angina and hypertension, neurological disorders including Alzheimer's disease, amnesia, bipolar disorder, dementia, depression, epilepsy, ischaemic cerebrovascular

cu useful in assays to determine their biological activities. The proteins of the proteins are also be used as biomarkers to identify tissues or cell types which cc express the proteins. The polynucleotide molecules can be used as comparable or chromosomes and to elicit immune responses. CC The proteins and antibodies are useful in diagnosis and treatment of comparable of the comparable 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Secreted protein; platelet disorder; stem cell disorder; osteoporosis; osteoarthritis; burn; incision; ulcer; periodontal disease; neuropathy; nervous system disease; bone growth; cosmetic plastic surgery; nervous system disease; bone disease; cancer; gut regeneration; fibrosis; cancer;

OAT's are preferentially proteins that facilitate the transport of organic anions or tertiary acclive transport involving exchange of another account is thought to be a secondary identical except at the C-terminal end. Hoar party active transport involving exchange of another organic anion. encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hoar expression.

                                                                                                                                                                                                                       the encoded polypeptides (AAM38642-AAM4223) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful gene therapy. A composition containing a polypeptide or polynucleotide system, such as peripheral nervous injuries, peripheral nervous alzheimer's, Parkinson's disease, Huntington's diseases, such as tetral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer disgnosis and thrapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S. discreases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qγ
The present sequence is human protein with hydrophobic domain encoding CDNA clone HP03613. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-JAN-2000; 2000JP-0000585.

It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence this record will be updated with the finished sequence this second as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Center project name: L1273

It currently sequences is consists of 9 contigs. The true order of the pleces is not known and their order in this sequence record as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence runs of N, but the exact sizes of the gaps are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequencing vector: PCR products; 100% of reads chemistry: Dye-terminator ET-amersham; 100% of reads chemistry: Dye-terminator ET-amersham; 200% of reads chemistry: 162010 bases at least Q40 consensus quality: 162010 bases at least Q30 consensus quality: 165430 bases at least Q30 consensus quality: 165408; sum-of-contigs quality coverage: 6.27x in Q20 bases; sum-of-contigs quality coverage: 6.27x in Q20 bases;
